For temporary and for back up air conditioning rental

Electrical Appliances

Description

From a technical point of view, [mobile air conditioning](#) and ordinary air conditioning using power, cooling capacity is basically the same. The air circulation is designed to reduce the indoor air temperature at the same time, and inhaled into the outdoor fresh air; in essence, air conditioning through the outdoor compressor for hot and cold Exchange the temperature, and mobile air conditioning is completed by the indoor unit alone.

[Portable air conditioner](#) can greatly reduce the temperature of the surrounding air, to bring people a cool feeling, but we in the actual operation of the process to pay attention to the scope of this temperature, because it is a small air-conditioning, so you can control the temperature range.

Our [cooling engineers](#) can help you work out what equipment you need and then size it according to your project, location and temperature requirements.

We can also provide ducting and cabling, together with power generation, [pumps](#) and any other equipment needed to give you a complete, reliable cooling system.
